

COUPALEX Hydraulic inter-row mower

I WEED MY VINEYARD: LIGHTWEIGHT TILLING IMPLEMENT
Between two plowings, when it is necessary to mow.

SUPPORTS

MULTIFUNCTIONAL PARALLELOGRAM
MECHANICAL DELETION

SUPPORT
By perches

SUPPORT
By Gogues

80 kg for each pair of lawnmowers
40 kg per pair of mower blades

All vine widths

The COUPALEX mower trims grass near the ground. It is equipped with a versatile parallelogram linkage that facilitates the mechanical retraction of the tool (feeler). The airflow generated by the rotating blades elevates the grass prior to cutting. Its right-angle drive positions the engine and hoses away from the cutting head, thereby safeguarding the berries.

BENEFITS

- Effortless and efficient installation on a multifunctional stand.
- The motor and hoses are positioned away from the bays due to the right-angle drive.
- Utilize with or without a probe, contingent upon the shape and age of the feet.
- Foot bypass through the upper freewheel
- Plate adjustment through the free lower bowl
- Cutting diameter: 400 mm
- Low flow rate (25-30 L/min at 180 bar)
- Mass gathering
- Knife ventilation
